COURSE OBJECTIVES

Course Web Page: http://www.terry.uga.edu/~schatt/4550/default.htm

Why do countries trade with each other? What determines the pattern of trade in the world economy? What should optimal trade policy be? These are some of the many questions concerning the nature and effects of international trade that this course attempts to analyze. Using the tools of microeconomic analysis, this course explores the basis and pattern of trade among countries, as well as its welfare and distributional implications. Further topics include the barriers to free trade, the reasons for limiting trade, market imperfections, economic integration, and current trade policy issues. Systematic study of the material in this course helps students develop the skills necessary to gain insight into the workings of an open economy as well as the state of our international economic
order, both past and present. The basic approach will be theoretical, yet numerous applications and examples will be presented.
